

SAFEHER AI

PROBLEM STATEMENT

- Women may face unsafe situations while travelling or staying alone.
- Getting immediate help during an emergency can be difficult.
- Manual calls and messages may take time during critical situations.
- Family members or guardians may not know the user's real-time safety status.
- Users may hesitate or be unable to manually trigger an SOS in dangerous situations.
- Existing safety solutions may require multiple steps during an emergency.

NEEDS OF SAFEHER AI

- Quick access to emergency help
- Real-time location sharing with guardians
- AI-based safety monitoring
- Continuous communication with trusted contacts
- Safe route guidance during travel
- Smart alerts for risky situations
- Low-battery safety notifications
- A single platform for personal safety

FEATURES

Manual SOS

User can manually trigger an emergency alert.

Shake-to-SOS

Shake gesture can be used to activate SOS

Live GPS Tracking

Shares the user's real-time location.

Edge AI Voice SOS

Detects “Help” / “Madat” even without internet

AI Monitoring

Continuously checks the user's safety and triggers an alert if a potential risk or no response is detected.

Guardian Safety Dashboard

Allows guardians to view the user's safety status, location, battery, device status, last active time and SOS status.

EXISTING SYSTEM

- Manual SOS: User has to manually call or message someone during an emergency.
- Limited Real-Time Monitoring: Guardians may not continuously know the user's safety status.
- Internet Dependency: Many safety services depend on internet connectivity.
- Separate Safety Services: Location sharing, emergency contacts, and alerts are often handled separately.
- Delayed Emergency Response: Manual actions can cause delays in getting help.

TECHNOLOGIES USED

Current Web Application :

Frontend

- HTML
- CSS
- JavaScript

Backend

- Python
- Flask
- SQLite

AI & APIs

- Google Gemini API
- GoogleMaps/Geolocation
- Leaflet Maps

Future Android Application :

Android

- Java
- XML
- Android Studio

Backend

- Firebase
- Cloud Firestore
- Firebase Storage
- Cloud Messaging

Other

- GPS · Google Maps · Accelerometer · Gyroscope · AI · HTML · CSS · JavaScript

FUTURE SCOPE

- Smartwatch Integration

  Connect wearable devices for continuous safety monitoring.
- Wearable SOS Device

  A compact device with GPS, SOS button, and movement sensors.
- Edge AI Voice Detection

  Detect emergency voice commands directly on the device.
- Child Safety System

  Provide GPS tracking and emergency alerts for children.
- Emergency Service Integration

  Connect with appropriate emergency services for faster assistance.

CONCLUSION:

SafeHer AI is an AI-powered personal safety solution designed to provide quick emergency assistance, real-time location sharing, AI-based safety monitoring, and guardian connectivity. It brings multiple safety features together in one platform to help users stay safer during emergencies and travel.

THANK YOU
